Network adapters or network adapters for monitoring the USV system do not require additional software. An integrated 32-bit microprocessor with a proprietary operating system continuously monitors all UPS activity and manages numerous events (power failure, overload, bypass, failure, etc.) and performs the following actions. Available in the versions internal and external. The internal version is housed in a corresponding slot of the UPS system.

Supply voltage 9 - 30 V DC (power supply included with external versions).

EXECUTABLE FUNCTIONS

- Storage of log files with date and time
- Storage of the history of the most important operating data with date and time
- Sending emails
- Execution of scheduled operations
- Execution of shutdowns on the remote computers
