Product Description

Expansion module for connection to the AlarmManager-PRO.

This module extends the external inputs and outputs of AlarmManager on additional 8 digital inputs and 8 digital outputs (KIO7052) or 16 digital inputs (KIO7053).

Communication is via Ethernet, so the module can be mounted anywhere. The configuration is done in the software interface of the AlarmManager-PRO. The module provides a build in web-server with for simple IP configuration and testing of the inputs and outputs without any additional software.

Up to 6 modules (max. 96 alarm inputs) can be connected to one AlarmManager-PRO!
