As an optional complement to our high-quality stainless steel server cabinets, we offer fan heaters that are ideal for use in extreme environments, including outdoor and demanding industrial applications. These fan heaters are approved for railway use in areas with elevated shock and vibration requirements, such as in wind power and mobile applications, and they excel even in extreme conditions. They operate reliably even at temperatures as low as -40°C.

The FLH fan heater series consists of two variants with heating capacities of 250 and 400 watts, making them particularly suitable for use in our stainless steel server cabinets. They feature integrated fans that support natural convection, ensuring quick and uniform heat distribution inside the cabinet. With a classic screw mounting, they are easy to install.

Count on Lehmann IT as your trusted partner for cooling solutions that not only safeguard but also optimize the performance of your electronic equipment in any environment.
