The 120×120 mounting gasket is designed for the precise and vibration-damped installation of silent fans in IT enclosures. It supports panel thicknesses between 1.5 and 2.5 mm, ensuring a secure fit without deformation of the housing.

The gasket reduces structure-borne noise, improves airflow stability, and supports quiet operation in environments where low acoustic output is required. It is suitable for use in acoustic racks, office racks, and all applications where clean airflow and mechanical decoupling of fans are important.
